

Structural MCE $M_1 = \{v_1, v_2, v_3, v_4\}$, $M_2 = \{v_3, v_4, v_5, v_6\}$

M_1 is feasible
 $\text{avgSim}(M_1) = 0.693$
accept $C_1 = M_1$

M_2 is infeasible
 $\text{avgSim}(M_2) = 0.427$
bounded subset search

Feasible subset
 $C_2 = \{v_3, v_5, v_6\}$
 $\text{avgSim}(C_2) = 0.693$

Global filter deduplicate candidates and remove strict subsets

Output $\mathcal{R} = \{C_1, C_2\}$
